EDUCATION

Indian Institute of Information Technology (IIIT) Kottayam

Kerala, India

Bachelor of Technology - Computer Science and Engineering

Nov 2022 – May 2026

Relevant Coursework: Operating Systems, Data Structures, Analysis Of Algorithms, Artificial Intelligence, Machine Learning, Databases, Cloud Computing

PROJECTS

Simplify – Production SaaS RAG Application — GitHub

May 2026

Tech Stack: Next.js, TypeScript, FastAPI, Python, MongoDB Atlas, Pinecone, Supabase, Gemini

- Built a production SaaS RAG platform where users upload documents, build a searchable knowledge base, and receive Gemini-streamed answers with source citations – deployed on Vercel (frontend) and Render (FastAPI backend).
- Engineered a 10-step document ingestion pipeline: file validation, Supabase Storage upload, text extraction, overlap chunking, Gemini embedding generation, MongoDB metadata persistence, and Pinecone vector upsert.
- Implemented JWT auth with refresh-token rotation, access-token denylisting for global logout, and email OTP verification with rate limiting (3 requests / 15-minute window) and 10-minute OTP expiry via SMTP.

AI Resume Intelligence Platform — Repository Available Upon Request

2026 – Present

Tech Stack: FastAPI, Python, PostgreSQL, Redis, Qdrant, Gemini, Celery, MLflow, Docker, Next.js

- Building an enterprise hiring platform with semantic candidate search, ATS resume scoring, and a RAG copilot that answers recruiter queries with cited evidence.
- Designed a hybrid ranking pipeline combining vector similarity (Qdrant), skill match scores, experience signals, and recruiter feedback loops, with all experiments tracked in MLflow for iterative model improvement.
- Implemented multi-tenant RBAC with organization-level data isolation, audit logging, API key management, and Celery-backed async workers for large-scale resume ingestion and embedding generation.

TaskFlow – Employee Task & Incident Management API — GitHub

2025

Tech Stack: Java 17, Spring Boot 3, Spring Security, JWT, PostgreSQL, Docker, GitHub Actions

- Built a production-grade REST API in Spring Boot 3 with role-based access control (ADMIN/USER), supporting full task lifecycle management across 5 status states, 4 priority levels, and 4 task types.
- Implemented stateless JWT auth and a JPA Specification pattern for composable, type-safe dynamic filtering across status, priority, assignee, and keyword – with safe sort-field validation to prevent 500 errors.
- Built an immutable `TaskHistory` audit trail logging every field-level mutation with actor and timestamp, via a `BaseEntity` mixin applying `createdAt/updatedAt/createdBy/updatedAtBy` to all entities through Spring Data Auditing.
- Containerized with multi-stage Docker builds and Docker Compose, with a GitHub Actions CI/CD pipeline running JUnit 5 + Mockito tests and producing a Swagger UI at `/swagger-ui.html` on every push.

TECHNICAL SKILLS

Programming Languages: Java, Python, C/C++, JavaScript, TypeScript, SQL (PostgreSQL, MySQL), R

Web Technologies: Next.js, React, Node.js, Express.js, FastAPI, Flask, Spring Boot

Libraries & Tools: LangChain, Celery, MLflow, Docker, GitHub Actions, Pandas, NumPy, Scikit-learn, TensorFlow, PySpark (Basics)

Databases: PostgreSQL, MongoDB Atlas, Redis, Pinecone, Qdrant, Supabase, Vector Databases

Cloud & AI: Google Cloud Platform (GCP), Gemini (Chat + Embeddings), Vercel, Railway

CERTIFICATIONS

Google Cloud Study Jam - October 2023

GDSC, IIIT Kottayam

October 2023

- Completed hands-on cloud labs covering Compute Engine, IAM, Cloud Storage, and Kubernetes Engine workloads.

Graph Theory Programming Camp

AlgoUniversity

2024

- Solved 17+ advanced graph problems spanning BFS/DFS variants, shortest-path algorithms, and DP-on-graphs.
